

Call for Contributions

PhD-Workshop « Rethinking Governance in Times of Multiple Crises: The Cases of Climate Change and Pandemics»

October 16 - 18, 2023

Villa Vigoni, Italy

We live in times of multiple crises. Governance strategies for crisis response, especially in terms of prevention and preparedness, are confronted with cascading and intertwined processes resulting in extensive delimitations and interactions between social, political and economic dynamics. Especially for the cases of climate change and the Covid-19 pandemic the governance of multiple crises has to cope with high degrees of urgency, uncertainty and complexity. This workshop aims to critically rethink governance in times of multiple crises by assessing crises responses of political decision-makers, scientific experts and society in the context of climate change and pandemics. It invites theoretical and empirical research contributions that focus on one of the two crisis phenomena and relate the following topics:

1. Political crisis management: between techno fixes and social participation

Of particular interest are PhD projects that concentrate on adaptation practices, coping strategies, and political reaction patterns at the local, national, European and global level. As preparedness and security technologies are important issues when dealing with crises, contributions that critically assess the role of techno-fixes as a solutionist agenda for crisis governance are just as welcome as research perspectives addressing the question of how social conflicts are in danger to be concealed by digital black boxes of crisis response. This also entails the question of how political actors react to crises, e. g. with regard to specific processes of securitization or global modes of crisis governance that tend to oscillate between cooperation and national interests. Also the role of new paradigms of crisis governance, like the prominent but vague concept of resilience could be reflected.

2. Crises reactions of scientists and experts: science-policy-nexus and the role of knowledge

The role of knowledge is a key issue, as it is equally important in the context of crises such as the corona pandemic and climate change. The observation that knowledge, on the one hand, acts as a central resource - especially for political decisions - but, on the other hand, is becoming increasingly fragile and ambiguous, represents an important feature of public and political debates. In the context of epistemic crises, it could be discussed how the sometimes lamented lack of transparency in the production, communication and use of scientific knowledge for political decisions can be remedied. Also the relationship between the natural and social sciences and their function in public and political debates in terms of relevant crisis knowledge is to be considered.

3. The social dimension of crises: risk perception, medialization and imaginaries

The workshop also welcomes contributions that shed light on the social dimensions of crises with regard to the governance of climate change and pandemics. This could touch on patterns of risk perception and how they lead into specific individual and collective coping strategies or certain forms of social movements. Furthermore, the role of (social) media in times of crises and how they affect either to processes of cohesion and solidarity or to polarization, disintegration and injustice can be addressed. Also contributions that deal with (social) imaginaries of both crises and crises responses and their entanglements with visions of different kinds of future(s) are of great interest and very welcome.

Workshop Goals and Application Process

The PhD-Workshop is organized within the framework of the research project "[Multiple Crises. Covid-19 and the Entanglements of Public Health, Security and Ecology in Europe](#)" – funded by the German Ministry for Education and Research (BMBF) – in cooperation with Sciences Po, Paris. It will bring together scholars from different academic traditions in an interdisciplinary and interactive work environment. During a three-day event, the above highlighted three research axes will structure the exchange on theoretical, conceptual and methodological approaches to researching multiple crises. In the beautiful environment of the [Villa Vigoni at the Lago di Como](#), this coming together will be enriched by a trilateral roundtable and other input sessions in collaboration with Dr. Carola Klöck (Sciences Po, Paris), Prof. Elena Esposito (University of Bielefeld & University of Bologna) and Jun. Prof. Ulrike Zeigermann (University of Würzburg). Other goals of the workshop are to provide a space for networking and for developing collaborative publication projects.

The workshop is planned as a live event to be held at the Villa Vigoni and will be conducted in English. There are no application fees and all costs for accommodation and travelling will be covered completely. The call invites 12 PhD students engaged in social science, political science, geography, philosophy, history, or law that address questions of crisis perception, governance and crisis response. As it is a trilateral workshop a particular interested lies on contributions from German, French and Italian researcher contexts. The applications should include (A) a letter of motivation (max. 1 page) including self-assignment to the three central questions; (B) a brief synopsis and progress of the PhD project (max. 1 page) and (C) a CV, including a publication list, if applicable (max. 2 pages).

The applications must be submitted as a single pdf sent by **June 11, 2023** to: gabriel.bartl@cmb.hu-berlin.de & judith.hardt@cmb.hu-berlin.de. Selected participants will be notified by mid-June and provided with different kinds of material to be well prepared for workshop.

Organizers

Dr. Gabriel Bartl & Dr. Judith Nora Hardt (Centre Marc Bloch)
